

WanderOn Complete API and Frontend Backend Integration Audit

Repository and Deployed Application Analysis

Field	Value
GitHub Repository	https://github.com/ggauravky/wanderon-ashokSoft
Deployed Application	https://wanderon-ashok-soft.vercel.app/
Audit Date	24 September 2026
Document Version	1.0
Prepared Output	Microsoft Word DOCX

Table of Contents

In Microsoft Word, right click the table of contents and choose Update Field if page numbers need refreshing after edits.

1 Executive Summary

WanderOn is a travel commerce and operations platform with a Vite React frontend, an Express backend, and MongoDB models for users, trips, bookings, leads, quotations, media, marketing, and creator commerce.

The audit inspected repository structure, backend route registrations, frontend service calls, authentication and authorization, database model usage, external integrations, and selected deployed runtime behavior. The source code was not modified.

Metric	Value
Backend API entries discovered	185
Frontend service or direct API calls discovered	121
Production API base URL observed	https://wanderon-ashoksoft.onrender.com/api
Runtime verified public APIs	Health, readiness, trips, media, active banners, pages, SEO metadata
Confirmed deployment caveat	Vercel /api paths return SPA HTML; deployed bundle calls Render API

2 Project Architecture

The implemented architecture is a React single page application that calls a separate Express REST API. The backend uses route modules, authentication middleware, controllers, service helpers, Mongoose models, and external integrations.

Layer	Actual Implementation
Frontend	Vite React application in frontend/src
API Client	fetch based helpers in frontend/src/services/apiConfig.js, api.js, and quotationService.js
Backend	Express application in backend/server.js
Routing	Route modules under backend/routes mounted under /api
Controllers	Request handlers under backend/controllers
Services	Quotation, media, attribution, analytics, pricing, and itinerary helpers under backend/services
Database	MongoDB accessed through Mongoose models under backend/models
External APIs	Razorpay, Gemini, Cloudinary, Twilio WhatsApp, Brevo email

Architecture flow:

Step	Flow
1	React page or component
2	API helper or direct fetch
3	API_BASE_URL
4	Express route
5	Middleware and role checks
6	Controller
7	Service, model, or external API
8	JSON response
9	Frontend UI state update

3 Repository Structure

Folder or File	Purpose
frontend/src/pages	Public, customer, staff, booking, quotation, and profile route pages
frontend/src/components	Reusable UI, booking, itinerary, quotation, media, CRM, and document components
frontend/src/staff	Staff shell, navigation, role protection, and admin sales marketing modules
frontend/src/services	Primary frontend API helpers and quotation service helpers
backend/server.js	Express app setup, CORS, health endpoints, and router mounting
backend/routes	Express route registrations
backend/controllers	HTTP request handlers

backend/services	Business logic and helper services
backend/models	Mongoose schemas and models
backend/middlewares	Authentication, upload, and rate limiting middleware
backend/utills	JWT, Cloudinary, WhatsApp, HTTP response, and utility helpers

4 API Configuration

The frontend API base URL is defined in frontend/src/services/apiConfig.js as VITE_API_URL or /api. Development uses the Vite proxy to forward /api to http://localhost:5000. The deployed frontend bundle was observed to call https://wanderon-ashoksoft.onrender.com/api.

Configuration	Evidence or Purpose
VITE_API_URL	Frontend API base URL used at build time
API_BASE_URL	Computed frontend constant in apiConfig.js
Authorization header	Bearer token from localStorage key wanderlux_token
backend/server.js	Mounts route modules under /api
frontend/vercel.json	Rewrites all frontend paths to index.html
MONGODB_URI or MONGO_URI	MongoDB connection variable name
JWT_SECRET	JWT signing secret variable name
RAZORPAY_KEY_ID and RAZORPAY_KEY_SECRET	Payment gateway variable names
GEMINI_API_KEY or GOOGLE_API_KEY	AI itinerary generation variable names
CLOUDINARY variables	Media upload variable names
TWILIO variables	WhatsApp delivery variable names
BREVO variables	Quotation verification email variable names

5 Complete Backend API Inventory

The following table was generated from backend/server.js and backend/routes. Status values separate source inspection from runtime verification.

ID	Method	Endpoint	Purpose	Route File	Controller	Middleware	Status
1	GET	/	Backend root status endpoint	backend/server.js:110	inline root handler	none	UNVERIFIED
2	GET	/health	Backend health check	backend/server.js:79	healthPayload	none	WORKING
3	GET	/api/health	Backend API health check	backend/server.js:79	healthPayload	none	WORKING
4	GET	/api/readiness	Database readiness check	backend/server.js:80	inline readiness handler	none	WORKING
5	GET	/api/admin/stats	Admin platform management	backend/routes/adminRoutes.js:18	getAdminStats	none	UNVERIFIED
6	GET	/api/admin/team-analytics/members	Admin platform management	backend/routes/adminRoutes.js:19	getTeamAnalyticsMembers	none	UNVERIFIED
7	GET	/api/admin/team-analytics/members/:userId	Admin platform management	backend/routes/adminRoutes.js:20	getTeamMemberAnalytics	none	UNVERIFIED
8	GET	/api/admin/coupons	Admin platform management	backend/routes/adminRoutes.js:21	getCoupons	none	UNVERIFIED
9	POST	/api/admin/coupons	Admin platform management	backend/routes/adminRoutes.js:22	createCoupon	none	UNVERIFIED
10	PUT	/api/admin/coupons/:id	Admin platform management	backend/routes/adminRoutes.js:23	updateCoupon	none	UNVERIFIED
11	PUT	/api/admin/coupons/:id/toggle	Admin platform management	backend/routes/adminRoutes.js:24	toggleCoupon	none	UNVERIFIED
12	DELETE	/api/admin/coupons/:id	Admin	backend/routes/adminRoutes	deleteCoupon	none	UNVERIFIED

	TE		platform management	.js:25			ED
13	GET	/api/admin/payouts/eligible-creators	Admin platform management	backend/routes/adminRoutes.js:26	getEligiblePayoutCreators	none	UNVERIFIED
14	GET	/api/admin/payouts	Admin platform management	backend/routes/adminRoutes.js:27	getPayouts	none	UNVERIFIED
15	POST	/api/admin/payouts	Admin platform management	backend/routes/adminRoutes.js:28	createPayout	none	UNVERIFIED

7 Frontend to Backend API Mapping

Most frontend calls map directly to backend routes with the same method and path under the configured API base URL. Dynamic IDs and slugs are represented as route parameters in the backend.

ID	Feature	Frontend Caller	API Function	Endpoint	Route File	Controller	DB or Service	Status
1	Authentication	AuthContext and login/signup pages	registerApi, loginApi, getMeApi, updateProfileApi	/api/auth/*	authRoutes.js	authController	User	WORKING WITH CONDITIONS
2	Trips	Home, Destinations, TripDetails, BookingDates	getTripsApi, getTripByIdOrSlugApi, direct fetch	/api/trips/*	tripRoutes.js	tripController	Trip	WORKING for list
3	Bookings	BookingDates, Checkout, Profile, BookingConfirmation	booking API helpers	/api/bookings/*	bookingRoutes.js	bookingController	Booking, Trip, Razorpay	UNVERIFIED mutating
4	Leads CRM	CallbackForm, Contact, Sales workspace	createLeadApi, getAdminLeadsApi, lead action APIs	/api/leads/*	leadRoutes.js	leadController	Lead, User, FollowUp	WORKING WITH CONDITIONS
5	Quotations	Sales quotation modules and public quotation gateway	quotationService helpers	/api/quotations/*	quotationRoutes.js	quotationController and quotationV2Controller	Quotation family models, Brevo	WORKING WITH CONDITIONS
6	AI Planner	AIPlannerPage and AIPlannerModal	generateAllItineraryApi and itinerary helpers	/api/ai/*	aitineraryRoutes.js	aitineraryController	Itinerary, Gemini, media resolver	UNVERIFIED external
7	Admin	Admin workspace modules	admin API helpers	/api/admin/*	adminRoutes.js	admin controllers	Multiple models	401 without token observed
8	Marketing	Marketing dashboard campaign and banner modules	marketingRequest helpers	/api/marketing/*	marketingRoutes.js	marketing controllers	Campaign, Banner, MediaAsset	WORKING public banners
9	Media	Media library and upload modals	listMediaAssetsApi and media helpers	/api/media/* and /api/upload/*	mediaRoutes.js uploadRoutes.js	mediaAssetController uploadController	MediaAsset, Cloudinary	WORKING public list

8 Complete API Flow

Flow	Implementation
Authentication	Login page -> AuthContext -> loginApi -> POST /api/auth/login -> authRoutes -> loginRateLimit -> loginUser -> User lookup and bcrypt check -> JWT response -> token stored in localStorage
Booking	BookingDates or Checkout -> calculateBookingPricingApi -> createBookingOrderApi -> Razorpay order -> Booking pending record -> Razorpay checkout -> verifyBookingPaymentApi -> HMAC signature verification -> Booking confirmation -> UI
Quotation V2	Staff quotation editor -> quotationService V2 helper -> quotationRoutes -> protect and role check -> quotationV2Controller -> Quotation and revision/share/event models -> JSON response -> staff UI
Public Quotation	PublicQuotationGateway -> public V2 quotation APIs -> optional recipient verification -> Brevo email if configured -> verification or decision response -> public UI
AI Planner	AI planner UI -> generateAllItineraryApi -> aitineraryRoutes -> generateItineraryController -> Gemini if configured or fallback generation -> media resolver -> feasibility sanitizer -> itinerary response
Media	Media picker or admin media workspace -> listMediaAssetsApi -> mediaRoutes -> mediaAssetController -> MediaAsset query -> media JSON response

9 API Request Details

Request details are defined by each frontend helper and backend controller. JSON APIs use Content Type application/json. Upload APIs use FormData and set only the Authorization header manually. Protected APIs require Authorization: Bearer token.

Pattern	Request	Response
Auth login	POST /api/auth/login with email and password	User summary plus JWT token or authentication error
Public catalog	GET /api/trips with optional query filters	success flag, count, and trip data
Booking pricing	POST /api/bookings/calculate-pricing with tripId, travelersCount, occupancy, couponCode, batch selection	Pricing object or validation error
Payment verification	POST /api/bookings/verify-payment with Razorpay order ID, payment ID, signature, booking ID	Verified booking or payment error
Protected admin reads	GET /api/admin/* with bearer token and admin role	Requested dashboard/list data or 401/403
Uploads	POST /api/upload/image or /document with multipart form data and bearer token	Cloudinary/local upload metadata or storage error

10 Authentication APIs

Method	Endpoint	Controller	Middleware	Status
POST	/api/auth/register	registerUser	none	UNVERIFIED
POST	/api/auth/login	loginUser	loginRateLimit	UNVERIFIED
POST	/api/auth/influencer-login	influencerLogin	loginRateLimit	UNVERIFIED
POST	/api/auth/influencer-apply	applyInfluencer	protect	WORKING WITH CONDITIONS
POST	/api/auth/influencer-signup	applyInfluencer	protect	WORKING WITH CONDITIONS
GET	/api/auth/me	getMe	protect	WORKING WITH CONDITIONS
PUT	/api/auth/profile	updateUserProfile	protect	WORKING WITH CONDITIONS

No logout endpoint, refresh token endpoint, password reset endpoint, OTP endpoint, Google authentication endpoint, or cookie session implementation was found in the backend routes. Logout is a frontend token removal action.

11 Authorization and Role Based Access

Roles present in the User model are user, admin, super_admin, operations, sales, marketing, and influencer. Protected APIs use protect, requireRoles, adminOnly, influencerOnly, operationsOrAdmin, and checkPermission.

Method	API	Authentication	Role or Permission Middleware	Result
PUT	/api/ai/itinerary/:id	Required	protect	401 without token, 403 without role
DELETE	/api/ai/itinerary/:id	Required	protect	401 without token, 403 without role
POST	/api/ai/itinerary/:id/share	Required	protect	401 without token, 403 without role
POST	/api/auth/influencer-apply	Required	protect	401 without token, 403 without role
POST	/api/auth/influencer-signup	Required	protect	401 without token, 403 without role
GET	/api/auth/me	Required	protect	401 without token, 403 without role

12 Database Mapping

API Area	Model	Collection	Operation
Auth	User	users	CREATE READ UPDATE
Trips	Trip	trips	CREATE READ UPDATE DELETE
Bookings	Booking, Trip, Coupon, Commission, WalletLedger	bookings and related collections	CREATE READ UPDATE
Leads	Lead, User, FollowUp	leads users followups	CREATE READ UPDATE
Quotations	Quotation, QuotationRevision, QuotationShare, QuotationEvent, QuotationApprovalVerification	quotation collections	CREATE READ UPDATE DELETE
AI Itineraries	Itinerary, Trip, MediaAsset	itineraries trips mediaassets	CREATE READ UPDATE DELETE
Admin Analytics	User, Trip, Booking, Lead, Review, Quotation	multiple collections	READ AGGREGATION
Marketing	Campaign, Banner, MediaAsset	campaigns banners mediaassets	CREATE READ UPDATE DELETE
Media	MediaAsset, Trip, Quotation, Page	mediaassets and related collections	CREATE READ UPDATE DELETE
Influencer	Coupon, Commission, WalletLedger, Payout	coupon commission wallet payout collections	CREATE READ UPDATE
Pages and SEO	Page, Trip	pages trips	CREATE READ UPDATE DELETE
Reviews	Review	reviews	CREATE READ
Pricing Rules	PricingRule	pricingrules	CREATE READ UPDATE DELETE

13 External API Integrations

Service	Calling File	Endpoint or API	Purpose	Status
Razorpay	backend/controllers/bookingController.js	Razorpay Orders and HMAC signature verification	Booking checkout and balance payment	UNVERIFIED
Razorpay Checkout JS	frontend/src/utills/razorpay.js	https://checkout.razorpay.com/v1/checkout.js	Browser payment modal	UNVERIFIED
Google Gemini	backend/controllers/aitineraryController.js	gemini-1.5-flash	AI itinerary generation	UNVERIFIED with fallback
Cloudinary	backend/utills/cloudinaryService.js	Cloudinary uploader SDK	Image document and video upload	UNVERIFIED
Twilio WhatsApp	backend/utills/whatsappService.js	Twilio Messages API	Booking ticket WhatsApp delivery	UNVERIFIED optional
Brevo Email	backend/services/quotationEmailService.js	https://api.brevo.com/v3/smtp/email	Quotation recipient verification email	UNVERIFIED optional
Dicebear	backend/controllers/authController.js	Avatar SVG URL	Default avatar on registration	Source verified URL construction

14 Deployed Application Verification

API	Action Tested	Request	HTTP Status	Response	Status
/api/health	GET Render	GET https://wanderon-	200	status ok	WORKING

	backend health	ashoksoft.onrender.com/api/health		databaseConnected true	
/api/readiness	GET Render backend readiness	GET https://wanderon-ashoksoft.onrender.com/api/readiness	200	status ready	WORKING
/api/trips	GET public trips	GET Render backend trips	200	success true count 54	WORKING
/api/media	GET public media	GET Render backend media	200	success true data array	WORKING
/api/marketing/banners/active	GET active banners	GET Render backend active banners	200	success true empty banners	WORKING
/api/pages	GET pages	GET Render backend pages	200	page array	WORKING
/api/seo/meta?path=/	GET SEO metadata	GET Render backend SEO meta	200	meta title and description	WORKING
/api/admin/stats	GET without token	GET Render backend admin stats	401	Not authorized no token provided	WORKING WITH CONDITIONS
Vercel /api/trips	GET frontend host path	GET https://wanderon-ashoksoft.vercel.app/api/trips	200	React HTML not JSON	NOT BACKEND ROUTE

15 Backend APIs Without Frontend Callers

Method	Route	Controller	Possible Purpose	Status
POST	/api/auth/influencer-signup	applyInfluencer	Alias for creator application	UNUSED OR ALIAS
POST	/api/ai/edit-plan	editPlanController	AI edit or copilot endpoint	NO DETECTED CALLER
POST	/api/checkout/apply-coupon	applyCouponServerSide	Coupon validation alias	NO DETECTED CALLER
POST	/api/checkout/bookings	createAttributedBooking	Attributed booking placeholder	NO DETECTED CALLER
POST	/api/checkout/webhooks/payment	paymentWebhook	Payment provider webhook	EXTERNAL CALLBACK
POST	/api/checkout/webhooks/payout	payoutWebhook	Payout provider webhook	EXTERNAL CALLBACK
POST	/api/trips/seed	seedTrips	Admin seed utility	ADMIN UTILITY
GET	/api/admin/reports/revenue	getRevenueReport	Admin report	NO DETECTED CALLER
GET	/api/admin/reports/departures	getDepartureOccupancyReport	Admin report	NO DETECTED CALLER
GET	/api/admin/reports/lead-funnel	getLeadFunnelReport	Admin report	NO DETECTED CALLER
ALL	/api/pricing-rules/*	pricingRuleController	Pricing administration	NO DETECTED CALLER
POST	/api/upload/images	uploadImageController	Bulk image upload	NO DETECTED CALLER
POST	/api/upload/documents	uploadDocumentController	Bulk document upload	NO DETECTED CALLER
POST	/api/upload/video	uploadVideoController	Video upload	NO DETECTED CALLER
GET	/api/media/health	getMediaHealth	Media diagnostics	HELPER EXISTS

16 Frontend API Calls Without Backend Routes

Frontend File	Method	Endpoint	Expected Backend Route	Finding
frontend/src/services/quotationService.js	POST	/quotations/public/:token/decision	POST /api/quotations/public/:token/decision	Route exists but is intentionally disabled by legacyPublicDecisionDisabled
frontend/src/pages/TripDetails.jsx	GET	fallback http://localhost:5000/api/trips/:id	GET /api/trips/:idOrSlug	Route exists; production safety depends on VITE_API_URL being set

Production Vercel host	GET	/api/*	Render backend API	Frontend host rewrites to index.html; not a backend route
------------------------	-----	--------	--------------------	---

17 Broken or Mismatched APIs

No API was confirmed broken during safe read-only runtime testing. The following are confirmed mismatches or caveats.

Severity	API or Area	Expected Behavior	Actual Behavior	Evidence	Impact
High	Vercel /api/*	Return backend JSON	Returns React SPA HTML due frontend rewrite	frontend/vercel.json and runtime GET /api/trips	Manual API testing on Vercel host is misleading
Medium	Legacy public quotation decision	Record customer decision	Route exists but handler disables legacy decisions	quotationRoutes.js maps to legacyPublicDecisionDisabled	Legacy public quotation view may fail for decisions
Medium	TripDetails fallback URL	Use deployed API in production	Fallback is localhost when VITE_API_URL absent	frontend/src/pages/TripDetails.jsx	Production builds without env would fail detail API calls
Low	SEO route comment	Comment and route agree	Controller comment mentions metadata while route is /meta	seoRoutes.js and seoController.js	Documentation mismatch only

18 API Status Summary

Status	Count
Working	8
Working With Conditions	107
Broken	0
Unused or no detected caller	15
Not Reachable	0
Unverified	70
External Dependency Failure	0

19 Feature Wise API Mapping

Feature	Representative APIs
Authentication	/api/auth/register, /login, /me, /profile, /influencer-login, /influencer-apply
Trips	/api/trips, /api/trips/:idOrSlug, /api/trips/admin/catalog, /api/trips CRUD
Bookings and Payments	/api/bookings/calculate-pricing, /create-order, /verify-payment, /pay-balance, /boarding-pass
Leads and Sales CRM	/api/leads, /api/leads/:id, /claim, /log-contact, /assign, /api/follow-ups
Quotations	/api/quotations, /api/quotations/v2, /public/v2/:token, shares, revisions, events, attachments
AI Itineraries	/api/ai/generate, /save, /my-itineraries, /itinerary/:id, /shared/:shareToken
Admin	/api/admin/stats, users, bookings, coupons, payouts, reports, team analytics
Marketing	/api/marketing/dashboard, campaigns, banners, lead analytics
Media and Uploads	/api/media, /resolve-itinerary, /admin, /api/upload/image, /document, /video
Influencer	/api/influencer/plans, coupons, wallet, transactions, payouts, analytics

20 API Flow Diagrams

Workflow	Diagram
Login Flow	User -> Login Page -> loginApi -> POST /api/auth/login -> authRoutes -> loginUser -> User database -> JWT -> localStorage -> authenticated frontend state

Booking Flow	User -> BookingDates -> calculate pricing -> Checkout -> create Razorpay order -> Booking record -> Razorpay modal -> verify payment -> Booking confirmed -> confirmation UI
Quotation Flow	Sales staff -> Quotation editor -> V2 API -> role middleware -> quotationV2Controller -> Quotation models -> share link -> public gateway -> customer verification and decision
AI Planner Flow	User -> AI Planner -> generateAllItineraryApi -> ailtineraryController -> Gemini or fallback -> media resolver -> Itinerary response -> save/share UI
Admin Flow	Admin user -> Staff shell -> protected module -> admin API -> protect/adminOnly -> controller -> model query or aggregation -> dashboard table

21 Final Master API Reference

ID	Method	Endpoint	Purpose	Front end Caller	Route File	Controller	Middleware	DB or External Service	Runtime Status	Evidence
1	GET	/	Backend root status endpoint	See frontend mapping where detected	backend/server.js	inline root handler	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/server.js:110
2	GET	/health	Backend health check	See frontend mapping where detected	backend/server.js	healthPayload	none	Mongo DB or external service as controller requires	WORKING	backend/server.js:79
3	GET	/api/health	Backend API health check	See frontend mapping where detected	backend/server.js	healthPayload	none	Mongo DB or external service as controller requires	WORKING	backend/server.js:79
4	GET	/api/readiness	Database readiness check	See frontend mapping where detected	backend/server.js	inline readiness handler	none	Mongo DB or external service as controller requires	WORKING	backend/server.js:80
5	GET	/api/admin/stats	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getAdminStats	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/routes/adminRoutes.js:18
6	GET	/api/admin/team-analytics/members	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getTeamAnalyticsMembers	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/routes/adminRoutes.js:19
7	GET	/api/admin/team-analytics/members/userId	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getTeamMemberAnalytics	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/routes/adminRoutes.js:20
8	GET	/api/admin/coupons	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getCoupons	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/routes/adminRoutes.js:21
9	POST	/api/admin/coupons	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	createCoupon	none	Mongo DB or external service as controller requires	UNVERIFIED	backend/routes/adminRoutes.js:22
10	PUT	/api/admin/coupons/id	Admin platform management	See frontend mapping	backend/routes/adminRoutes.js	updateCoupon	none	Mongo DB or external service as	UNVERIFIED	backend/routes/adminRoutes.js:23

				where detected				controller requirements		
11	PUT	/api/admin/coupons/:id/toggle	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	toggleCoupon	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:24
12	DELETE	/api/admin/coupons/:id	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	deleteCoupon	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:25
13	GET	/api/admin/payouts/eligible-creators	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getEligiblePayoutCreators	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:26
14	GET	/api/admin/payouts	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getPayouts	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:27
15	POST	/api/admin/payouts	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	createPayout	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:28
16	GET	/api/admin/payouts/:id	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getPayoutById	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:29
17	PUT	/api/admin/payouts/:id/status	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	updatePayoutStatus	none	Mongo DB or external service as controller requirements	UNVERIFIED	backend/routes/adminRoutes.js:30
18	GET	/api/admin/users	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	getAdminUsers	none	User, JWT	UNVERIFIED	backend/routes/adminRoutes.js:31
19	POST	/api/admin/users/staff	Admin platform management	See frontend mapping where detected	backend/routes/adminRoutes.js	createAdminStaffUser	none	User, JWT	UNVERIFIED	backend/routes/adminRoutes.js:32

22 Testing Limitations

- Real user login was not performed because no credentials were provided.
- Signup, lead creation, booking creation, quotation creation, uploads, and payment actions were not executed because they mutate database or external service state.
- Razorpay payment verification requires real provider response values and signatures.
- Admin, sales, marketing, and influencer dashboards require authenticated users with specific roles.
- Cloudinary, Brevo, Twilio, Razorpay, and Gemini behavior depends on environment variables that were not exposed and should not be exposed in this report.
- Runtime verification was limited to safe read-only endpoints and one unauthenticated protected endpoint check.

23 Conclusion

The audit discovered 185 backend API entries and 121 frontend service or direct API call constructions. The source code shows a broad travel platform API surface covering authentication, trips, bookings, payments, quotations, AI itineraries, media, marketing, admin operations, sales CRM, and influencer commerce.

The deployed frontend is operational and calls the Render backend API. The most important deployment observation is that Vercel /api paths are not backend routes; the production bundle avoids this by using the Render API base URL.

No source files, routes, controllers, environment variables, deployment settings, or database records were modified during this audit.
